Let me ask Mark, I know he is slammed with work and I am big part of that problem so he may want to wave off for a few weeks.

Seems reasonable. Should we wait until data are in, or would you rather talk sooner?

I'm certainly interested in hearing Mark's reasons...

Mark has expressed to me his concerns that we cannot correlate data from this lab with data from Bens' for a variety of reasons. I was hoping that would be some work so we could ensure a crosswalk.

Lisa,

I haven't seen any final data yet (cord or crib) on the vigilant. When we get those data I'll share them with you. I do know that he struggled with some of the early burns (crib) and consulted with Mark a few times regarding just how to find the right air setting.

Like you, I'm hopeful that the data are at least reasonably comparable, though the pre-'88 nature of the Vigilant may occlude some of the trend agreement we might hope for.

Stef

Did he give day 1 measurements for the vigilant and did he do any baseline crib testing matching Mark's work so we might be able to see if we can correlate his data?

Lisa,

I do not know if he has done any other cordwood work on the vcs.

He has done (with our contract dollars) recent doug fir cordwood testing (vigilant stove), however those filters are still drying and we don't have data yet. I don't know how many dollars are left in that purse, but if there are enough I intend to ask for some Western Larch cordwood tests. Not sure yet if that will happen or now.

You may, or may not know, that Ben's lab is no longer an EPA Approved lab, and so he is limited to R&D or other 'investigative' work.

Stef

Thanks! Has Ben done any other testing work on the species issue? Can that data be shared? Is there more work happening than the burns he has in the memo?

On another note, I have gone through the 30 day notice requirements, my understanding is that test data must be submitted to EPA within 60 days of conducting the test. Who does that data go to and how can the public access it? My understanding is emissions data can't be held confidential and since they sent it in for certification testing, it isn't a development stove so the public should have access – correct? Any thoughts or advice on how to access this information – 1) that the data was submitted and 2) the emissions data.
